AutoCAD LT 2018 rendering engine options Microsoft Ray Tracing is the latest AutoCAD LT 2018 rendering engine. It is based on Microsoft's open source GPU ray tracing platform, DirectX Ray Tracing (DXR). The new rendering engine includes both the static and dynamic aspects of Ray Tracing. The static aspects (referred to as Ray Tracing) use ray casting to simulate the basic lighting effects of reflection, refraction and shadow. These static effects are used in most CAD applications. AutoCAD LT 2018 also offers different types of rays to detect dynamic objects such as dynamic light sources and moving objects. The dynamic aspects of Ray Tracing use a fixed beam of rays to simulate the interaction of a beam of light with the object under consideration. The following images show the static and dynamic aspects of Ray Tracing.

Static aspects of Ray Tracing Dynamic aspects of Ray Tracing Cumulative rendering When Ray Tracing is used in Cumulative Rendering mode, an additional non-cumulative buffer is used to store accumulated information. This information includes point cloud data and shaded triangles. The extra buffer is used to store ray tracing information during the rendering process. The information is retrieved and displayed in the image viewer. List of AutoCAD LT 2018 rendering engine options. AutoCAD LT 2018 has a
